> Download the official Rummy 365 APK (v12.4.1, 48 MB, Android 6.0+). Install guide, ₹50 free signup credit, ₹3,000 welcome bonus, safety checks and FAQ.

Our #1 ranked rummy app, direct from the official source — verified file details, a clean five-step install, ₹50 free on signup and a ₹3,000 welcome bonus behind it.

App Overview

Rummy 365 sits at the top of our rankings, and the APK is where everyone starts. The headline numbers explain why we rate it #1: ₹50 free the second you register with no deposit required, a welcome package worth up to ₹3,000 on your first deposit, and UPI withdrawals that landed between instantly and 30 minutes in every test we ran this year. No other app on our list combines a no-deposit credit, a four-figure matched bonus and payouts that fast.

The app itself backs up the offers. You get the full spread of formats — Points, Pool (101 and 201) and Deals rummy — plus a daily tournament schedule that stays busy from morning to past midnight. Matchmaking at ₹0.05 and ₹0.10 point tables is near-instant, which matters if you plan to grind out the bonus at low stakes. Table graphics are clean rather than flashy, and the card-sorting and discard-tracking tools are some of the better ones we've used.

The current build, v12.4.1 , shipped in June 2026 and weighs in at 48 MB — slightly heavier than budget rivals like Rummy Nabob , but the extra weight buys you smoother animations and a more polished lobby. Support runs 24×7 through in-app chat, which is rarer than it should be in this category.

For the complete breakdown — bonus release maths, withdrawal testing, the few genuine downsides — read our full Rummy 365 review . This page focuses on getting the APK onto your phone safely and claiming the signup credit.

APK Requirements & Compatibility

Here's the spec sheet for the current official build:

Android 6.0 as a floor means almost any handset sold in India since 2017 qualifies. We ran v12.4.1 on three test devices — a flagship, a mid-ranger and a ₹7,000 budget phone with 3 GB RAM — and the only difference was lobby load time. At the table itself, frame rates held steady on all three.

There's no native iOS app . iPhone owners can play through the mobile site, which mirrors the cash tables but won't push tournament reminders or wallet notifications, so Android plus the APK remains the full experience.

Two practical pre-flight checks. First, confirm at least 250 MB of free storage — the install will fail silently at the unpacking stage if you're tight on space, and the resulting error message blames the "package" rather than telling you the real cause. Second, download over Wi-Fi or strong 4G/5G. An interrupted download produces a corrupt APK and the dreaded "App not installed" message; re-downloading the file fixes it nine times out of ten.

If you're on Android 5.x or older, the app won't install at all — consider Rummy Nabob , which supports Android 5.1, as the closest alternative.

A few install errors worth decoding, since they generate most of the questions we receive about this app. "App not installed as package appears to be invalid" — corrupt download; delete the file and fetch it again. "Blocked by Play Protect" — Google flags all real-money APKs generically; tap "Install anyway" once you've verified the file size, since this warning reflects category policy rather than a scan result. "There was a problem parsing the package" — you're below Android 6.0, or the download truncated. Install button greyed out — another app is drawing over the screen; close screen-dimming or cleaner apps and retry. None of these indicate a problem with your phone, and all are fixable in under a minute.

It's also worth knowing what the first launch looks like so nothing surprises you: the app downloads a small asset patch (a few MB), asks for notification permission — say yes if you want withdrawal confirmations and tournament reminders, both genuinely useful here — and drops you at the registration screen. Total time from tapping the download button to sitting at a table was under four minutes in our run-through, including OTP.

Safety Checklist

Because Rummy 365 distributes outside the Play Store, you don't get Google's automatic scanning — which means a sixty-second manual check is worth doing every single time:

- Source discipline. Download exclusively from this page's button or the official Rummy 365 site. Telegram "official channels", YouTube video descriptions and APK mirror sites routinely host tampered builds with the real branding.
- Size verification. The genuine v12.4.1 file is 48 MB. A 4 MB file is a stub downloader that fetches who-knows-what; a 90 MB file has something bundled inside it. Either way, delete it.
- Permission audit. During install and first launch, Rummy 365 asks for network access, storage and notifications. The moment any rummy APK requests SMS reading, contact access or accessibility services, you're looking at an OTP-stealing trojan dressed up as a card game.
- No mods. "Unlimited chips" and "always win" mods cannot work — the cards are dealt on the server, not your phone. Every modded rummy APK in existence is malware, full stop.

One more habit worth keeping: after any APK install, toggle the "install unknown apps" permission back off (step 4 above). It takes ten seconds and closes the door on drive-by installs later.

Why does the #1 app on our list still get faked? Because popularity is the product counterfeiters sell. Search any well-known rummy brand plus "APK" and the top organic results include mirror sites hosting builds nobody has audited; the bigger the brand, the more such mirrors exist. Rummy 365's genuine distribution is

deliberately narrow — its own site and partner pages like this one — which means anything found elsewhere deserves default suspicion, not benefit of the doubt. If you've already installed from an unknown source before reading this, uninstall, check your SMS permissions list, change your UPI PIN as a precaution, and reinstall clean.

Honest Take Before You Install

The offer stack here is genuinely the best we track, but read it for what it is. The ₹50 free credit is a trial balance — enough for a few dozen hands at micro-stakes Points tables, not a withdrawal-ready gift. The ₹3,000 welcome bonus releases in slices as you play raked hands after depositing, which is how every matched bonus in Indian rummy works; Rummy 365's release rate is simply better than most. We've decoded the exact terms in our rummy signup bonus guide if you want the maths before committing.

You'll also need PAN-based KYC before your first cashout. Do it on day one rather than when a withdrawal is pending — verification took under two hours in our experience, but you don't want your first win stuck behind it.

Who shouldn't install? If you only ever play free-entry games, the bonus structure is wasted on you, and a lighter app like Holy Rummy with its ₹51 free credit and daily bonus wheel may suit casual play better. For everyone else — especially players who deposit at least ₹500 and play a few sessions a week — this is the strongest overall package on the site, which is exactly why it holds our #1 spot.

Play with a budget, not a target. Real-money rummy is 18+ and carries genuine financial risk — our responsible gaming guide covers deposit limits and self-exclusion tools worth setting up before your first cash table.

How to Install the APK

Hit the download button above and let the 48 MB APK save through Chrome or your stock browser. Ignore any Rummy 365 file someone shares in a WhatsApp group — official source only.

Android will block the install at first and point you to Settings → Install unknown apps . Toggle the permission on for your browser — this is standard for every direct-download app.

Open the downloaded APK from your notification shade or Files app and tap Install. On a mid-range phone the whole thing finishes in under half a minute.

Head back to Settings → Install unknown apps and switch the browser toggle off. Leaving it on permanently is an unnecessary security hole.

Register with your mobile number and the OTP. The ₹50 no-deposit credit lands in your bonus wallet immediately, and the ₹3,000 welcome offer activates on your first deposit.

Yes — provided you install the official v12.4.1 build, which is 48 MB and asks only for network, storage and notification permissions. Reject any file that's a different size or that requests SMS or contact access, and never touch modified 'hack' versions.

Google Play admits only a handful of real-money rummy operators in India, so most apps — Rummy 365 included — distribute through direct APK download. It's the normal route for this category, not a red flag.

Two things: ₹50 free credited on signup with no deposit needed, plus a welcome bonus worth up to ₹3,000 released against your first deposit as you play. Full terms are in our Rummy 365 review .

Budget around 220 MB of free storage for the 48 MB APK plus the installed app, and 2 GB of RAM. Any phone running Android 6.0 or newer handles it without lag — we tested on a four-year-old budget device.

When a new version ships, the app shows an update banner and downloads the fresh APK for you. Install it straight over the old version — your balance, KYC and game history all carry over. Never uninstall first.
