>
> Official Rummy Mars APK download (v4.2.6, just 36 MB, Android 5.1+). Install steps, ₹38 free bonus, daily login rewards, safety checklist and FAQ.

One of the smallest rummy APKs we list at just 36 MB — quick to download on any connection, easy on storage, and it pays you a little something every day you log in.

App Overview

Storage anxiety is real on a budget phone. When 32 GB fills up with WhatsApp media and the camera roll, a 50 MB game client is the first thing that gets uninstalled. Rummy Mars is built for exactly that reality: the APK is 36 MB , the installed footprint stays around 130 MB, and the whole experience is engineered to run light. Among the apps we track, only a couple of compact clients like Rummy Club squeeze in smaller — and neither pairs it with Rummy Mars's reward cadence.

That cadence is the second hook: daily login rewards . Open the app, collect a small credit — every day, deposit or no deposit. Streak milestones pay noticeably more, which builds a surprisingly strong habit loop. Add the ₹38 free signup credit and a first-deposit offer worth up to ₹1,000, and the value proposition for a casual, every-evening player is clear, even though none of the individual numbers top our charts.

The rummy itself is competent and unpretentious. Points, Pool and Deals formats, sensible micro-stakes, and a fast-growing player base that kept matchmaking quick at the low tables where most Mars players live. UPI and Paytm withdrawals cleared between instantly and three hours for us — not the fastest on the site, but reliably inside the promised window every time.

Current build is v4.2.6 from April 2026, requiring Android 5.1+. For the full assessment — including where the thin tournament scene and modest bonus ceiling cost it points — see our complete Rummy Mars review .

APK Requirements & Compatibility

The numbers that matter for the current release:

This is about as undemanding as real-money rummy gets. Android 5.1 covers practically every smartphone sold in India this decade, and we confirmed clean performance on a 2 GB RAM device — table animations were simplified compared with heavyweight clients, but turn timers, card sorting and the reward calendar all worked without a hitch. On anything mid-range or newer, you won't think about performance at all.

The small download size has a practical benefit beyond storage: it survives bad connections. A 36 MB file on congested mobile data completes where a 50 MB one might stall — though if a download does break, the symptom is the misleading "App not installed" error at install time. The cure is always the same: delete the partial file and download again, ideally on Wi-Fi.

No iOS build exists, and Rummy Mars's browser version is barebones — Android via APK is realistically the only way to play properly, and the only way to collect daily rewards with notification reminders.

Free up roughly 170 MB before installing and you're set. If even that's a squeeze, clearing the cache of one social app usually liberates more than enough.

Error translation, should you need it: a parse error means the file truncated mid-download or your Android is older than 5.1; "App not installed" is the same corrupt-download problem wearing a different message; a Play Protect interstitial is Google's blanket caution for the entire real-money category, cleared with "Install anyway" once you've matched the 36 MB size; and an install that hangs at 90% wants more free storage than you currently have. Every one of these resolves with re-downloading or clearing space — none of them means Rummy Mars is incompatible with your phone if it meets the Android 5.1 floor.

For daily-reward collectors on prepaid data: a login-and-collect visit costs almost nothing (1–2 MB), and even a full evening session stayed under 25 MB on our meter. That makes Mars one of the few real-money apps you can realistically maintain a streak on with a basic data pack — fitting, given the audience it's clearly built for.

Safety Checklist

Light app, full-weight precautions. Smaller brands attract impersonators precisely because fewer players can spot a fake, so check these every time:

- Download from here or the official site — nowhere else. "Rummy Mars unlimited bonus" APKs on Telegram and mirror sites are not generous forks of the app; they're wallet-draining malware wearing its icon.
- The size is the signature. Genuine v4.2.6 is 36 MB. With an app this small, fakes often arrive larger — the original client plus an injected payload. Treat any meaningful deviation as disqualifying.
- Permissions: three and only three. Network, storage, notifications. A card game requesting SMS access wants your OTPs; one requesting contacts wants your friends as phishing targets. Cancel the install the moment either appears.
- Server-side games can't be modded. Deals are computed on Rummy Mars's servers, so no APK can rig them in your favour. Anyone claiming otherwise is selling you spyware.

Finish with the cleanup step people skip: revoke your browser's install-unknown-apps permission once the icon's on your home screen. Ten seconds now beats a silent drive-by install later. And if something already slipped through — sudden battery drain, an SMS permission you never granted — uninstall first, change your UPI PIN second, and only then reinstall the genuine build from this page.

Honest Take Before You Install

Rummy Mars rewards a specific habit — showing up daily — more than it rewards a big opening deposit. Read the numbers accordingly. The ₹38 signup credit is bonus cash with a wagering requirement, the daily rewards are genuinely free but individually small, and the ₹1,000 welcome ceiling is modest next to the

market leaders. If maximum first-week value is the goal, Rummy 365 and its ₹3,000 package is the stronger play, and our rummy app with bonus comparison ranks every alternative.

The honest case for Mars is the long tail: a light app you'll never be tempted to uninstall for space, free credit drip-feeding in daily, and low-stakes tables full of similarly casual opponents. Players who treat rummy as a twenty-minute evening wind-down get more from that combination than from a big bonus they'd never finish wagering. It also pairs naturally with Rummy Guru — Mars for the daily rewards, Guru for cheaper rake when you want a longer session — and both together still use less storage than one heavyweight client.

A note on the streak psychology, because it's the app's engine and worth understanding before you start: daily login rewards are designed to make missing a day feel like a loss, and milestone bonuses sharpen that feeling. The credits are real and claiming them costs nothing — but notice if "collecting my reward" starts becoming "and one quick game while I'm here" on days you hadn't planned to play. The reward is free; the session it tempts you into is not. Players who treat the login as a ten-second errand extract pure value from the system; players who can't open the app without sitting down at a table are paying for their free coins.

KYC with PAN is required before your first withdrawal, minimum cashout is ₹100, and payouts run instant to three hours. And the standing rule applies regardless of how small the stakes feel: 18+ only, real money at risk, budget decided in advance. Our responsible gaming guide explains the in-app limit tools — set them on day one, while it's easy.

How to Install the APK

Use the button at the top of this page. At 36 MB the file arrives fast even on patchy 4G — but still let it finish fully. Download directly in your browser, not via forwarded links.

Android will ask before installing anything from outside the Play Store. Accept the redirect to Settings → Install unknown apps and enable your browser for this one install.

Open the APK from your downloads and confirm. Thanks to the small package, installation wrapped up in about 15 seconds on every phone we tried.

Return to Settings → Install unknown apps and disable the browser permission. Rummy Mars handles its own updates in-app, so you won't need it again.

Register with mobile number + OTP to receive ₹38 free instantly. Then open the app daily — the login reward calendar credits you something every day, with bigger drops on streak milestones.

The official v4.2.6 build is safe — 36 MB, asking only for network, storage and notification permissions. Because it's a smaller brand, fake versions circulate on mirror sites; if the size or permissions differ from these, don't install.

Play Store rules exclude most real-money rummy operators in India, allowing only a small approved list. Rummy Mars distributes via direct APK like the majority of the category — routine, not suspicious.

₹38 free on signup with no deposit, daily login rewards that credit small amounts each day you open the app, and a first-deposit welcome offer worth up to ₹1,000. Details and terms are in our Rummy Mars review .

Around 170 MB total — the 36 MB APK plus roughly 130 MB installed. It's one of the most storage-friendly real-money apps we've measured, and 2 GB of RAM on Android 5.1+ runs it without complaint.

The app flags new releases at launch and downloads the replacement APK itself. Install over the existing copy — never uninstall first, although even if you did, your balance and login streak live on the server, not the phone.
