Rummy Referral Code: All Working Invite Codes

> **OVERVIEW**
>
> Current working rummy referral codes for India's top apps: Rummy 365, Rummy Nabob, Taj Rummy, A23 and more. How refer & earn really pays, plus claim steps.

One page for every working invite code — what each app pays per friend, how the instalments actually release, and the codes to enter at signup.

How Rummy Refer & Earn Actually Works

Every big rummy app pays you to bring friends, and the headline numbers look generous — up to ₹1,000 per friend. The mechanics behind those numbers are what this page decodes.

The universal model: you share your code or link, your friend registers with it, and the app pays you in instalments tied to your friend's activity — KYC completion, first deposit, and rake generated at cash tables. Almost nobody pays the full headline amount on signup alone.

A realistic example with Taj Rummy's "₹1,000 per friend": ₹50 lands when your friend completes KYC and first deposit, and the remaining ₹950 releases in chunks as they wager over the following weeks. A friend who deposits once and quits earns you ₹50–₹150, not ₹1,000.

That doesn't make refer-and-earn a gimmick — it's genuinely the highest-EV bonus in rummy if your invitees are real players. Refer the cousin who already plays daily, not your dormant group chat.

Per-App Programmes Compared

Two structures stand out. Rummy 365's flat ₹150 is the most honest — one verified friend with one deposit, full payout, done. Rummy Nabob's 30% rake share is the sleeper: it pays nothing upfront but compounds forever if you refer an active player — a daily grinder can be worth more per month than any flat bonus pays once.

Maximising Without Getting Banned

The refer-and-earn rules apps enforce hardest:

- One account per person, ever. Self-referrals via family members' PANs on your own device get flagged at KYC.
- Codes go in at signup. Screenshot your code and send it with the download link, because the field can't be filled later.
- Public code-dumping is low-yield. Codes pasted into YouTube comments rarely convert and some apps void rewards from spam channels. Personal invites to real players are worth 10× more.

For each app’s full programme terms, see the dedicated guides: Taj Rummy referral code , PlayRummy referral code , Ace2Three referral code and the broader refer and earn rummy strategy guide.

How Refer & Earn Works

Install the app and look for the referral / invite code field on the registration screen. Paste the code before submitting — most apps can't add it later.

Referral rewards only trigger once the invited player verifies their PAN. Unverified signups pay nothing.

Rewards release in instalments tied to the friend's deposits and cash-game activity — typically over 2–6 weeks.

Released referral cash lands in your withdrawable balance and cashes out via UPI like any winnings.

On paper, Taj Rummy and PlayRummy advertise up to ₹1,000 per friend — but both pay in instalments tied to the friend's deposits. For reliably-paid smaller amounts, Rummy 365's flat ₹150 per verified friend released the fastest in our testing.

Always at registration. Look for 'Referral code (optional)' or 'Invite code' on the signup screen. Most apps cannot apply a code retroactively, so don't skip the field.

The three usual reasons: your friend skipped the code field at signup, hasn't completed KYC yet, or hasn't deposited/played enough to trigger the first instalment. Check the app's refer-and-earn dashboard for each friend's status.

No. Apps match PAN, device fingerprint and payment details at KYC. Self-referrals forfeit both accounts' balances — it's the most common reason rummy withdrawals get blocked.

Yes — referral payouts are treated like other winnings and are subject to TDS rules on net winnings at withdrawal. The app deducts this automatically; you'll see it itemised in the withdrawal summary.

Related Pages

18+ only. Referral rewards are usually paid in instalments tied to your friend's deposits and gameplay, not as instant cash. Programme terms change frequently — confirm inside the app. Real-money rummy involves financial risk and may be addictive.
