Yono Games in India: App Status and Safety Guide

> **OVERVIEW**
>
> Understand Yono Games search results in India, distinguish gaming apps from YONO SBI, and check app identity, source evidence and Android safety.

“Yono Games” describes a group of similarly named gaming Apps and search terms. It is not a verified single company, and it must not be confused with State Bank of India’s YONO banking App.

What “Yono Games” means

Across promotional directories, “Yono” appears as a brand prefix attached to Rummy, slots, spin, Teen Patti and arcade-style products. Similar naming does not establish common ownership. An identity check must start from the exact App name and package—not from the word Yono alone.

They are not the same App

YONO SBI is State Bank of India’s banking and lifestyle App. SBI advises users to obtain its mobile Apps from Google Play or Apple App Store and says the bank does not distribute APK files through email, WhatsApp or SMS.

Do not trust a gaming App because it uses “Yono” in its name. Do not share an OTP, UPI PIN, Aadhaar, PAN or banking credential with an unknown gaming support account.

How to check a Yono-branded gaming App

- Record the exact App name and Android package ID.
- Identify the named developer and legal entity.
- Compare the website, privacy policy and store developer details.
- Check whether the current product uses a stake or promises cash value.
- Review permissions and scan unknown APK files.
- Record what is confirmed and what remains unknown.
